

DESCRIPTION

SP skin free admixture has been designed to greatly reduce the need for initial sanding of Gyvlon screed .

USES

SP has been formulated to give a skin free finish; which is ideal for floor finishes, and also does not impede drying efficiency; unlike other low laitance products on the market which can seal the surface and may under some conditions increase drying times. *

Please refer to your Area Technical & Specification Manager for availability and local performance.

SP can be added to many of the products in the Gyvlon range to give a skin free finish without affecting the characteristics of the mix. You still get the all the great benefits of our Gyvlon screed products based on our 30 years' experience but now with a skin free solution.

PRODUCT FEATURES

- Self compacting
- Environmentally friendly (Save up to 20Kge/CO2 per m2)
- High fluidity for fast cost effective installation
- Guaranteed compaction & quality
- Minimum SR2 surface finish
- Large bay sizes reducing the need for joints.
(Maximum bay size 1000m2; UFH 300m2)
- No reinforcement with greatly reduced cracking and no curling
- No need for a curing membrane

* In line with industry recommendations, sanding of the screed surface will be required prior to application of final finishes, this is necessary to provide a suitable key, remove surface build up caused by site traffic and following trades.
